Particle Hardware, on-site
Boron Device
Site location: in greenhouse/field/etc.
Connects to thermometer and humidity reader
Photon 2 Device
Site location: in-office
Alerts via LED for temp out of range
Boron Publishes a telemetry event to its log in the Cloud.
Boron syncs with Ledger for configuration values.
Photon syncs with Ledger for configuration values
Photon Publishes a alert event to its log in the Cloud.
Particle Cloud
Logic Function
When a telemetry event is published, triggers Logic Function to check temp vs threshold, then writes status to Ledger.
Ledger
Stores configuration data
Integration
When telemetry event is published, writes to Google Cloud Services.
Handles Webhook API for current weather and writes to Ledger
Google Cloud Services
Google Sheets
Google Apps Script
